# Mobilize & Handoff — adoption, measurement, go-decision

Fraud Detection Enhancement · first-capital

Go-decision: NO GO

No-go: 2 Mobilize kill trigger(s) fired (measurement\_unwired, business\_case\_blocker\_open). The Move is not ready to leave Moves. See the fix-conditions for what must change before it is reconsidered.

## Mobilize readiness

|                       |                                               |
|-----------------------|-----------------------------------------------|
| Owned                 | Yes                                           |
| Adoptable             | Yes                                           |
| Measurable            | NO                                            |
| Operating-model owner | David Chen (Risk Technology, Program Manager) |
| Overall change load   | high                                          |

## Fired kill triggers

- measurement\_unwired: 1 committed value metric(s) cannot be wired to a recorded baseline: Fraud-analyst FTE cost basis. — fix: Revisit when every committed metric is wired to a Discover baseline value or an owned, dated plan to capture one.
- business\_case\_blocker\_open: The business-case critic has 1 open blocker(s): cfo\_monetisation\_blocked. — fix: Revisit when the business-case critic reports no open blocker.

## Conditions to clear

- measurement\_unwired: Revisit when every committed metric is wired to a Discover baseline value or an owned, dated plan to capture one.
- business\_case\_blocker\_open: Revisit when the business-case critic reports no open blocker.

## Adoption & change approach — seven dimensions

| Dimension        | Magnitude | Recommendation                                                                                                                                                                                   |
|------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| impacted_roles   | high      | Three roles change; the fraud-analyst role changes most. Stage the rollout by alert segment, leading with card fraud.                                                                            |
| process_variance | high      | Disposition logic varies case handling materially; the process-re-design workstream must land before the change rollout (it is budgeted in the Design & Plan estimate).                          |
| training_load    | moderate  | Role-based training: a model-output-interpretation curriculum for analysts, a lighter curriculum for managers and BSA staff.                                                                     |
| incentive_change | moderate  | Re-point analyst performance metrics away from raw case throughput toward disposition accuracy and confirmed-fraud catch rate.                                                                   |
| manager_adoption | high      | Manager reinforcement is the highest-risk layer. A dedicated manager-enablement track with explicit reinforcement in the hypercare window.                                                       |
| communications   | moderate  | Address the analyst narrative directly — the model triages and prioritises; it augments analyst judgement under model-risk governance, it does not replace the analyst.                          |
| hypercare        | moderate  | A 6-week hypercare window with elevated model-monitoring support and a daily disposition-quality review; exit when the automated disposition rate and catch rate hold for two consecutive weeks. |

## Impacted roles

| Role                         | Headcount               | What changes                                                                                                                           |
|------------------------------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Fraud analyst                | Not recorded — seed gap | Analysts move from manually dispositioning a high-false-positive alert queue to reviewing model-prioritised, auto-dispositioned cases. |
| Fraud operations manager     | Not recorded — seed gap | Managers coach to the new disposition-automation metrics and monitor the model-decision queue.                                         |
| BSA / AML compliance officer | Not recorded — seed gap | SAR filing workflow re-baselined around the faster, model-prioritised case flow under continued OCC MRA scrutiny.                      |

## Value-measurement model — handed to Tower

| Metric                       | Baseline | Target  | Owner |
|------------------------------|----------|---------|-------|
| Card fraud annualized losses | 2100000  | 1200000 | CRO   |
|                              |          |         |       |

|                                |                         |                         |                  |
|--------------------------------|-------------------------|-------------------------|------------------|
| AML automated disposition rate | 34                      | 60                      | Fraud Operations |
| SAR filings past deadline      | 8                       | 0                       | BSA Officer      |
| Fraud-analyst FTE cost basis   | Not recorded — seed gap | Not recorded — seed gap | CFO              |
