

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

- A Charter business-case skeleton produced by the Moves Expert Kernel for this Move. The section structure is inherited from the curated Domain Function Pack; every figure is the kernel's — cost and value are ranges, never single points, unrecorded metrics are named seed gaps, and the verdict is the kernel's real recommendation, never invented.

Stop this Charter — on current assumptions the case does not pay back, and the honest kernel verdict is kill.

- Base-case net return is not positive — the Move does not pay back on current assumptions.
- Baseline: 4 of 12 Function-Pack operating metrics are recorded by this Move (coverage 33%). The remaining 8 are precise, named seed gaps — not fabricated values.
- Assumptions: 13 named assumptions derived from the Function Pack (haircut factors, value narrative, evidence anchors, pain themes); 12 are seed-gap proxies owned by a "to be confirmed with the tenant" placeholder — no human owner is fabricated.
- Value: the gross value range is built from the Function Pack's curated value benchmarks — labelled planning ranges, NOT this tenant's own measured unit economics. It is carried as a proxy, so the kernel honestly blocks a claimable dollar payback until the tenant's spend base and the seed-gapped metrics are supplied.
- Value: 8 operating metric(s) needed to ground the forecast are seed-gapped — the value range is a planning proxy, not a forecast, until they are closed.

This Charter skeleton inherits the curated Finance, treasury & ALM Charter outline — 8 sections, structure not improvised.

- This Charter Business-Case Skeleton inherits the curated Finance, treasury & ALM Charter outline from the bound Domain Function Pack. The agent does not improvise the structure — every section below is a curated, function-calibrated heading.

#	Section heading	Curated guidance
1	Executive answer	State the funding ask, the headline value separated into mar
2	Baseline model	Anchor every value claim to a measured baseline operating me
3	Scenario-conditional value forecast and haircuts	Build the forecast from the value-model benchmark ranges, th
4	Cost and effort	Cost the build, the integration to the ALM, general-ledger,
5	Sensitivity and downside	Show how the case moves under an adverse rate scenario, tigh
6	Model governance posture	State how any ALM, capital, forecasting, or behavioural mode
7	Kill criteria and conditions to proceed	Name the conditions under which the Move should not be funde
8	Tower measurement plan	State exactly which operating metrics Tower will track to pr

The case rests on one falsifiable claim — the Move moves this function’s operating metrics; a pilot that does not move them falsifies the case.

- A value hypothesis earns its place only if it can be proven false. This one is anchored on the recorded baseline and the curated Function-Pack value model — a pilot is the test.
- The bars carry no committed target — they are the recorded baseline the pilot must move; a single fabricated target would be a hard fail.
- Monetisation is blocked — the value rests on the Function Pack’s curated benchmark ranges, a planning proxy until the tenant’s spend base and seed-gapped metrics are supplied. The hypothesis is directional, never a fabricated dollar claim.

The early envelope is a range, not a number — \$5.20M to \$8.56M — and 24% of it is the business-change work AI cases routinely under-budget.

- The early envelope is a range — \$5.20M to \$8.56M, base \$6.12M — never a single number. 24% is business change, the half AI cases most often under-budget.
- Both bars are low–high ranges with a base marker — a single-point cost or ROI is a blueprint \$6 hard fail and is never shown.
- Business change is 24% of effort — a credible build-vs-change balance for an AI Move where value depends on people changing how they work.
- Researched benchmark rate card — fully-loaded annual rates derived from the 3-D SI benchmark (US Tier-1 archetype), a market planning range and NOT a quote. Override with a client-specific card before any commitment. — a researched planning benchmark, NOT a client quote.

Cost lane	Base cost	Basis
AI build, integration, data & run	\$4.62M	Build-side workstreams — includes \$756K year-1 run cost
Business change & adoption	\$1.50M	Process redesign, change & adoption, data governance — 2

Every assumption is owned and ranked by how much it moves the case — validating the seed-gap proxies is the highest-leverage shaping work.

- Every assumption is owned and ranked by how much it moves the case. 3 of the case-moving assumptions are seed-gap proxies — assumptions standing in for absent tenant data.
- A hatched bar is a seed-gap proxy; a solid bar is grounded. The widest bars are the assumptions the shaping spend must validate.

1 stop condition is already firing — which is precisely why the Charter cannot be funded straight to build.

- These are the conditions that stop or reshape the Move. 1 criterion is already firing — which is precisely why the Charter verdict is not a clean fund.

8 evidence asks gate build funding — closing them, not more analysis, is what turns this Charter into a fundable Design & Plan.

- Closing evidence — not more analysis — is the work that turns this Charter into a fundable Design & Plan. Each ask is a precise, named seed gap inherited from the curated Function Pack.
- The queue is sorted by decision impact — the widest bar is the next evidence ask. Funding-blocking asks outrank scope-informing asks.

Evidence ask before funding	Why it is a gap	Expected data source
Net interest margin (NIM) Blocks funding	"Net interest margin (NIM)" is not recorded — this	The general ledger and the ALM system, reconciling
