

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

- A CFO Pack in 8 slides — a financial challenge, not product advocacy. Every figure is produced by the Moves Expert Kernel for this Move. The verdict is the kernel's real recommendation ; value is a planning range; the do-not-fund holdbacks are explicit; and unrecorded metrics are named seed gaps, never papered over.

Finance should reject this Move — the case does not pay back on current evidence.

- Base-case net return is not positive — the Move does not pay back on current assumptions.
- Baseline: 4 of 12 Function-Pack operating metrics are recorded by this Move (coverage 33%). The remaining 8 are precise, named seed gaps — not fabricated values.
- Assumptions: 13 named assumptions derived from the Function Pack (haircut factors, value narrative, evidence anchors, pain themes); 12 are seed-gap proxies owned by a "to be confirmed with the tenant" placeholder — no human owner is fabricated.
- Value: the gross value range is built from the Function Pack's curated value benchmarks — labelled planning ranges, NOT this tenant's own measured unit economics. It is carried as a proxy, so the kernel honestly blocks a claimable dollar payback until the tenant's spend base and the seed-gapped metrics are supplied.
- Value: 8 operating metric(s) needed to ground the forecast are seed-gapped — the value range is a planning proxy, not a forecast, until they are closed.

The value is a planning range built on curated benchmark proxies — the net is a proxy ceiling, not a verified return, because the unit economics are a seed gap.

- Investment is \$5.20M–\$8.56M; the net value band is \$61–\$165 — but that is a proxy ceiling, not a verified return, because the unit economics are a seed gap.
- The value bar is hatched — it rests on a seed-gap proxy, so no payback or ROI is drawn. A single-point return is never shown.
- Value is built from the curated Function-Pack value benchmarks — labelled planning ranges — and discounted by the mandatory six-factor haircut. The dollar conversion needs the tenant's own spend base and the seed-gapped operating metrics; until those land, the value is a planning proxy, not a forecast.
- Payback — not computable. Monetisation is blocked; the case models net value, not cash, and never crosses break-even.

Figure	Low	Base	High
Net value (3-yr, post-haircut)	\$61	\$113	\$165
Investment	\$5.20M	\$6.12M	\$8.56M

The case-moving assumptions are ranked by sensitivity — the seed-gap proxies are the highest-leverage evidence the funding spend must replace with measured tenant data.

- The top 5 assumptions are ranked by how much they move the case. 5 of them are seed-gap proxies — assumptions standing in for tenant data that has not yet been captured.
- A hatched bar is a seed-gap proxy; a solid bar is grounded. Finance should challenge the widest bars first.

The case breaks the same way it is built — on the missing unit economics. Until the seed gaps close, every dollar in the case is a proxy, not a forecast.

- A CFO Pack must show what breaks the case before it shows the upside. For this Move the breakpoint and the case rest on the same missing number — the unit economics.
- The widest movers are the seed-gap proxies. Until they are measured, the case can swing in either direction without warning.
- The conservative case cannot be expressed in hard dollars — the value rests on a seed-gap proxy. A CFO funds the downside, not the point estimate; this case has no verifiable downside until the baseline gaps close. That is a withhold-capital signal, not a fund signal.
- Net interest margin (NIM) — "Net interest margin (NIM)" is not recorded — this function expects it; it is sourced from The general ledger and the ALM system, reconciling interest income and expense against average earning-asset balances.; its absence blocks the baseline and the value forecast.
- Liquidity coverage ratio (LCR) — "Liquidity coverage ratio (LCR)" is not recorded — this function expects it; it is sourced from The liquidity-risk and regulatory-reporting systems, computing HQLA and stressed outflows under the LCR rule.; its absence blocks the baseline and the value forecast.
- Net stable funding ratio (NSFR) — "Net stable funding ratio (NSFR)" is not recorded — this function expects it; it is sourced from The liquidity-risk and regulatory-reporting systems, computing available and required stable funding under the NSFR rule.; its absence blocks the baseline and the value forecast.
- Economic-value-of-equity rate sensitivity — "Economic-value-of-equity rate sensitivity" is not recorded — this function expects it; it is sourced from The ALM system, running the EVE measurement under the institution's rate-shock scenario set.; its absence blocks the baseline and the value forecast.

Scenario	Net return	Read
Conservative	-\$8.56M	The figure a CFO funds against
Base	-\$6.12M	Proxy ceiling — rests on the seed gap
Upside	-\$5.20M	Planning upper bound — not a commitment

5 things must be explicitly withheld at this gate — each with the condition that releases it. A CFO Pack without an explicit holdback list is a hard fail.

- A CFO Pack without an explicit holdback list is a hard fail. These are the 5 things finance should withhold at this gate — each with the condition that releases it.

Value will be proven, not asserted — every metric with a recorded baseline is measurable from day one; the seed-gapped metrics are honestly carried as not-yet-measurable.

- Value will be proven, not asserted. 4 of the 12 Tower metrics are measurable today against a recorded baseline; the seed-gapped metrics are honestly carried as not-yet-measurable.

Metric	Baseline	Owner
Net interest margin (NIM) Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Cost of funds Measurable	4.6 percent (blended)	Move sponsor (to be confirmed with the tenant)
Liquidity coverage ratio (LCR) Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Net stable funding ratio (NSFR) Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Economic-value-of-equity rate sensitivity Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Net-interest-income rate sensitivity Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Loan-to-deposit ratio Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Deposit beta Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Common equity tier 1 (CET1) capital ratio Seed gap	Not recorded — seed gap	Move sponsor (to be confirmed with the tenant)
Return on equity (ROE) Measurable	11.8 percent (EBITDA margin proxy)	Move sponsor (to be confirmed with the tenant)
Financial-forecast accuracy Measurable	78 percent (forecast vs actual)	Move sponsor (to be confirmed with the tenant)
Planning and close cycle time Measurable	8.5 business days to close	Move sponsor (to be confirmed with the tenant)

Metric	Readiness note
Net interest margin (NIM)	SEED GAP — not measurable until the baseline for "Net i
Cost of funds	Measurable now from the tenant baseline (Debt & FX expos
Liquidity coverage ratio (LCR)	SEED GAP — not measurable until the baseline for "Liqui
Net stable funding ratio (NSFR)	SEED GAP — not measurable until the baseline for "Net s
Economic-value-of-equity rate sensitivity	SEED GAP — not measurable until the baseline for "Econo
Net-interest-income rate sensitivity	SEED GAP — not measurable until the baseline for "Net-i
Loan-to-deposit ratio	SEED GAP — not measurable until the baseline for "Loan-
Deposit beta	SEED GAP — not measurable until the baseline for "Depos
Common equity tier 1 (CET1) capital ratio	SEED GAP — not measurable until the baseline for "Commo
Return on equity (ROE)	Measurable now from the tenant baseline (Revenue & cost
Financial-forecast accuracy	Measurable now from the tenant baseline (FP&A reconcilia
Planning and close cycle time	Measurable now from the tenant baseline (Month-end close bas

Finance can audit every number in this pack — 4 metrics trace to a named source, and the 8 missing ones are declared seed gaps, never silent.

- Finance can audit this pack end to end. Baseline coverage is 33% — 4 metrics trace to a named source; every missing one is a declared seed gap, never a silent omission.

Recorded metric	Value	Source	As of	Confidence
Cost of funds	4.6 percent (blended)	Debt & FX exposure (treasury_kyriba)	2026-03-31	medium
Return on equity (ROE)	11.8 percent (EBITDA margin proxy)	Revenue & cost baseline (finance_performance)	2026-03-31	medium
