

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

- A board-grade Mobilize & Go-Decision Packet produced by the Moves Expert Kernel for this Move. The mobilization-plan structure is inherited from the curated Domain Function Pack; every figure is the kernel's, and the go-decision is the kernel's real verdict — never an invented `go`.

NO-GO — the Move does not pay back on current assumptions; do not mobilize.

- Base-case net return is not positive — the Move does not pay back on current assumptions.
- Value cannot be monetised to a hard dollar figure — the gross value range rests on a seed-gap proxy. The CFO will not approve a fabricated return; the case must close the baseline gap first.
- 8 baseline metric(s) are seed gaps (coverage 33%): Net interest margin (NIM), Liquidity coverage ratio (LCR), Net stable funding ratio (NSFR), Economic-value-of-equity rate sensitivity, Net-interest-income rate sensitivity, Loan-to-deposit ratio, Deposit beta, Common equity tier 1 (CET1) capital ratio. The case is grounded only on what is recorded.

This packet inherits the curated Finance, treasury & ALM mobilization outline — 8 sections, the plan structure is not improvised.

- This Mobilize & Go-Decision Packet inherits the curated Finance, treasury & ALM mobilization-plan outline from the bound Domain Function Pack. The agent does not improvise the plan — every section below is a curated, function-calibrated heading.

#	Section heading	Curated guidance
1	Executive answer	State the funding ask, the headline value separated into mar
2	Baseline model	Anchor every value claim to a measured baseline operating me
3	Scenario-conditional value forecast and haircuts	Build the forecast from the value-model benchmark ranges, th
4	Cost and effort	Cost the build, the integration to the ALM, general-ledger,
5	Sensitivity and downside	Show how the case moves under an adverse rate scenario, tigh
6	Model governance posture	State how any ALM, capital, forecasting, or behavioural mode
7	Kill criteria and conditions to proceed	Name the conditions under which the Move should not be funde
8	Tower measurement plan	State exactly which operating metrics Tower will track to pr

The value to mobilize is a planning range built on curated benchmark proxies — the kernel honestly blocks a claimable dollar payback.

- Net 3-year value is carried as a planning range — point \$113. It rests on the Function Pack's curated benchmark proxies, so the kernel honestly blocks a claimable dollar payback until the tenant's own metrics land.
- These foundational and governance lanes are the first money the launch funds — they stand up the operating spine before any pilot value is claimed.

Workstream	Base cost	Headcount	Duration
Integration	\$776K	4	6 mo
Data	\$716K	4.5	5 mo
Foundational	\$163K	1	4 mo
Data governance	\$397K	2	6 mo

The readiness gates below are scored from the kernel state — the blocked gates are exactly what hold the go-decision.

- 5 readiness gates are scored from the kernel state. 2 are blocked — and the blocked gates are exactly what hold the go-decision. The heatmap makes the launch pre-conditions explicit, not assumed.
- A blocked gate is a hard pre-condition — the launch gate stays held until every blocked row is cleared.

4 of 12 metrics are wired to a recorded baseline — the rest are honest seed gaps.

- Tower will measure 12 committed value metrics — 4 are wired to a recorded baseline. The remaining 8 are honest seed gaps, carried with a capture plan, never dropped.
- The value loop does not yet close — seed-gapped baselines remain.

Metric	Baseline
Net interest margin (NIM) Seed gap	SEED GAP — not recorded
SEED GAP — not measurable until the baseline for "Net i	
Cost of funds Wired	4.6 percent (blended)
Measurable now from the tenant baseline (Debt & FX expos	
Liquidity coverage ratio (LCR) Seed gap	SEED GAP — not recorded
SEED GAP — not measurable until the baseline for "Liqui	
Net stable funding ratio (NSFR) Seed gap	SEED GAP — not recorded
SEED GAP — not measurable until the baseline for "Net s	
Economic-value-of-equity rate sensitivity Seed gap	SEED GAP — not recorded
SEED GAP — not measurable until the baseline for "Econo	
Net-interest-income rate sensitivity Seed gap	SEED GAP — not recorded
SEED GAP — not measurable until the baseline for "Net-i	
Loan-to-deposit ratio Seed gap	SEED GAP — not recorded

Every open action — kill criteria, critic blockers, and the precise seed gaps — is named, never blank.

- Nothing that gates the launch is unowned. Every open action — the kill criteria, the open critic blockers, and the precise seed gaps — carries a named owner and an explicit gate impact.
- The widest bars are the gate-blocking actions — the critical path to a clean go.

Open action	Owner	Gate impact
