

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

- A target-state architecture produced by the Moves Expert Kernel for this Move. The section structure is inherited from the curated Domain Function Pack; the target-state architecture, the reference patterns and the AI archetypes are the pack's curated material — the recommended pattern is the most human-accountable, never full autonomy. Declared seed gaps stay declared.

Shape the Move around the curated "Continuous driver-based planning layer" pattern — the most human-accountable of the function-calibrated reference patterns, not the highest-autonomy one.

- A pattern that runs financial planning as a continuous, driver-based process — the forecast assembled from balance, rate, volume, and expense drivers and re-run as actuals land — rather than as a periodic spreadsheet ex... Boundary: It builds and re-runs the driver-based forecast; the CFO and FP&A own the assumptions, the management overlay, and the communicated plan. It does not set the p...
- Every candidate is a curated reference solution pattern from the bound Domain Function Pack; the selected pattern is the most human-accountable, not the highest-autonomy option.
- The pattern is inherited from the curated Finance, treasury & ALM Domain Function Pack — the section structure and the pattern set are not improvised.
- The lowest-autonomy curated pattern is selected: an originated Move keeps a named human accountable before autonomy expands.
- The pack carries 5 reference patterns and 6 AI use-case archetypes — the architecture is calibrated to this function.

This deck inherits the curated Finance, treasury & ALM solution-architecture outline — 6 sections, structure not improvised.

- This Solution Architecture Pack inherits the curated Finance, treasury & ALM solution-architecture outline from the bound Domain Function Pack. The agent does not improvise the structure — every section below is a curated, function-calibrated heading.

#	Section heading	Curated guidance
1	Target-state architecture	Lay out the architecture against the function reference patt
2	Data architecture and integrations	Specify the ALM, general-ledger, FP&A, treasury, and liq
3	AI use-case design and control posture	For each archetype in scope, specify the value mechanism, th
4	Operating-model change	Define how FP&A, ALM, treasury, liquidity-risk, and capi
5	Model governance and responsible-AI controls	State the model risk-management treatment, validation, and e
6	Integration and build approach	Describe the build sequence, the integration patterns, and t

The target state is built from 5 curated reference solution patterns — every pattern names its boundary and a human accountability point.

- The target-state architecture is built from 5 curated reference solution patterns. Every pattern names its boundary — what it owns and what it explicitly does not — and a named human accountability point.

Reference pattern	Control posture	Human accountability point
Continuous driver-based planning layer Target	Human-In-The-Loop	The Chief Financial Officer accountable for the financial pl
Behavioural-assumption engine	Human-In-The-Loop	The Treasurer accountable for the behavioural-assumption set
Integrated capital-steering pattern	Human-Approval-Required	The Chief Financial Officer accountable for the capital plan
On-demand ALM scenario pattern	Human-On-The-Loop	The Asset-Liability Committee (ALCO), chaired by the Treasur
Continuous liquidity-surveillance pattern	Human-On-The-Loop	The Treasurer accountable for funding strategy, the liquidit

The architecture must support 6 curated AI use-case archetypes — each with a named value mechanism and control posture.

- The architecture must support 6 curated AI use-case archetypes — the recurring AI bets in this function. The agent recognises the bet instead of reasoning from zero; each archetype carries a named value mechanism and a control posture.

AI use-case archetype	Control posture	Data dependencies	Control / risk notes
Driver-based financial forecasting and planning	Human-In-The-Loop	General-ledger actuals and historical financial results; Bal	The model produces a
Deposit-behaviour and beta modelling	Human-In-The-Loop	Account-level deposit balance and rate history by product an	The model estimates c
ALM scenario and balance-sheet what-if acceleration	Human-On-The-Loop	The full ALM position data — assets, liabilities, and off-ba	The agent runs scenar
Liquidity and funding-concentration monitoring	Human-On-The-Loop	Account-level deposit data with insured/uninsured and concen	The agent monitors an
Capital allocation and stress-integration optimisation	Human-Approval-Required	Risk-weighted-asset and capital data by book and business li	The model informs cap
Financial-close and reconciliation automation	Human-Approval-Required	General-ledger and sub-ledger data with account mappings; Re	The agent automates s

A named human holds the decision right at the checkpoint — the curated patterns keep the agent assisting, never deciding alone.

- The agent retrieves, drafts and prepares — but the decision to act belongs to a named human. The accountability checkpoint is a real step in the workflow, drawn from the curated patterns' control posture, not a footnote.
- The agent lane and the human lane are explicit; the accountability checkpoint is drawn emphasised — the diagram shows, not asserts, where a named human stays in the loop.

Reference pattern	Control posture	Human accountability point
Continuous driver-based planning layer	Human-In-The-Loop	The Chief Financial Officer accountable for the financial pl
Behavioural-assumption engine	Human-In-The-Loop	The Treasurer accountable for the behavioural-assumption set
On-demand ALM scenario pattern	Human-On-The-Loop	The Asset-Liability Committee (ALCO), chaired by the Treasur
Continuous liquidity-surveillance pattern	Human-On-The-Loop	The Treasurer accountable for funding strategy, the liquidit
Integrated capital-steering pattern	Human-Approval-Required	The Chief Financial Officer accountable for the capital plan

Baseline coverage is 33% — 4 metrics recorded, 8 declared seed gaps. None are invented.

- Baseline coverage is 33% — 4 metrics are recorded by the Move, 8 are declared seed gaps inherited from the Function Pack. None are invented.

Operating metric	Source or declared gap
Cost of funds Recorded	Debt & FX exposure (treasury_kyriba)
Return on equity (ROE) Recorded	Revenue & cost baseline (finance_performance)
Financial-forecast accuracy Recorded	FP&A reconciliation (Lakeshore enterprise context load V
Planning and close cycle time Recorded	Month-end close baseline (operations_business_process)
Net interest margin (NIM) Seed gap	"Net interest margin (NIM)" is not recorded — this
Liquidity coverage ratio (LCR) Seed gap	"Liquidity coverage ratio (LCR)" is not recorded —
Net stable funding ratio (NSFR) Seed gap	"Net stable funding ratio (NSFR)" is not recorded
Economic-value-of-equity rate sensitivity Seed gap	"Economic-value-of-equity rate sensitivity" is not
Net-interest-income rate sensitivity Seed gap	"Net-interest-income rate sensitivity" is not reco
Loan-to-deposit ratio Seed gap	"Loan-to-deposit ratio" is not recorded — this fun
Deposit beta Seed gap	"Deposit beta" is not recorded — this function exp
Common equity tier 1 (CET1) capital ratio Seed gap	"Common equity tier 1 (CET1) capital ratio" is not

Metric	Why it is a gap	Expected data source
Net interest margin (NIM) Seed gap	"Net interest margin (NIM)" is not recorded — this	The general ledger and the ALM system, reconciling inte
Liquidity coverage ratio (LCR) Seed gap	"Liquidity coverage ratio (LCR)" is not recorded —	The liquidity-risk and regulatory-reporting systems, comp
Net stable funding ratio (NSFR) Seed gap	"Net stable funding ratio (NSFR)" is not recorded	The liquidity-risk and regulatory-reporting systems, comp
Economic-value-of-equity rate sensitivity Seed gap	"Economic-value-of-equity rate sensitivity" is not	The ALM system, running the EVE measurement under r
Net-interest-income rate sensitivity Seed gap	"Net-interest-income rate sensitivity" is not reco	The ALM system, running the net-interest-income simula
Loan-to-deposit ratio Seed gap	"Loan-to-deposit ratio" is not recorded — this fun	The general ledger and treasury systems, aggregating lo
Deposit beta Seed gap	"Deposit beta" is not recorded — this function exp	The ALM system and deposit-analytics models, comparin
Common equity tier 1 (CET1) capital ratio Seed gap	"Common equity tier 1 (CET1) capital ratio" is not	The capital and regulatory-reporting systems, computing

5 architecture decisions are still open — 3 block the production gate and must close before any go-live.

- 5 architecture decisions are still open. 3 of them block the production gate — closing those is the work that stands between this architecture and a go-live.
- The queue is ordered by gate impact — the widest bar is the next decision. A gate-blocking decision is drawn red.
