

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

Lakeshore Enterprise Finance & Treasury Modernization: Kyriba Rollout, Corporate Controls, Reporting Rationalization, Vendor Optimization & Value Realization

- The assembled book in eight slides — the whole Move pulled into one CEO / CFO / CIO read, with every other board-grade artifact deck linked. Every figure is produced by the Moves Expert Kernel for this Move; value is a planning range, unrecorded metrics are named seed gaps, and the verdict is the kernel's real recommendation, never invented.

KILL — the Move does not pay back on current evidence.

- Base-case net return is not positive — the Move does not pay back on current assumptions.
- Net value is post the mandatory six-factor haircut. The bars are planning ranges, never single points — and no payback is drawn, because the unit economics are a declared seed gap.
- Baseline: 4 of 12 Function-Pack operating metrics are recorded by this Move (coverage 33%). The remaining 8 are precise, named seed gaps — not fabricated values.
- Assumptions: 13 named assumptions derived from the Function Pack (haircut factors, value narrative, evidence anchors, pain themes); 12 are seed-gap proxies owned by a "to be confirmed with the tenant" placeholder — no human owner is fabricated.
- Value: the gross value range is built from the Function Pack's curated value benchmarks — labelled planning ranges, NOT this tenant's own measured unit economics. It is carried as a proxy, so the kernel honestly blocks a claimable dollar payback until the tenant's spend base and the seed-gapped metrics are supplied.
- Value: 8 operating metric(s) needed to ground the forecast are seed-gapped — the value range is a planning proxy, not a forecast, until they are closed.

The assembled case is sequenced through the curated phase outline — each phase narrows the scope and hardens the same evidence asks rather than papering over them.

- The assembled case is sequenced through the curated phase outline — Discover frames the problem, Charter sets the value hypothesis, Design & Plan costs the build, Mobilize designs the handoff. The same evidence asks are named consistently the whole way through.

The bet does not yet pay back under challenge — and the dossier is honest about why: the value rests on a seed-gap proxy, so no payback line is drawn.

- The build is a \$6.12M base planning estimate (range \$5.20M–\$8.56M). The net value is a planning proxy — the kernel honestly draws no payback line, because the unit economics are a seed gap.
- Hatched bars are seed-gap proxies — they stand in for absent tenant data and are the evidence asks that gate funding.

- The case breaks if the baseline seed gap is not closed — without the missing unit economics the value range is a proxy, not a forecast.

The execution path is decomposed into eight costed workstreams, and 4 of 12 committed value metrics are wired to a recorded baseline — the rest are honest seed gaps, not dropped.

- The execution path is decomposed into 8 costed workstreams, and 4 of 12 committed value metrics are wired to a recorded baseline. The remaining 8 are honest seed gaps, carried with a capture plan, not dropped.
- Business change is 24% of effort — a credible build-vs-change balance for an AI Move where value depends on people changing how they work.
- AI Ops cost is not supplied on this Move yet. The dossier keeps that run-cost gap visible instead of implying the operating cost is zero.

Workstream	Base cost	Headcount	Duration	AI-agent split
AI build	\$2.21M	7	9 mo	35%
Integration	\$776K	4	6 mo	20%
Data	\$716K	4.5	5 mo	30%
Foundational	\$163K	1	4 mo	15%
Data governance	\$397K	2	6 mo	10%
Process redesign	\$493K	3	5 mo	10%
Change & adoption	\$607K	2	9 mo	5%
Run (year-1 operations)	\$756K	2	12 mo	40%

Metric	Baseline	Readiness
Net interest margin (NIM) Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Net i
Cost of funds Wired	4.6 percent (blended)	Measurable now from the tenant baseline (Debt & FX expos
Liquidity coverage ratio (LCR) Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Liqui
Net stable funding ratio (NSFR) Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Net s
Economic-value-of-equity rate sensitivity Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Econo
Net-interest-income rate sensitivity Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Net-i
Loan-to-deposit ratio Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Loan-
Deposit beta Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Depos
Common equity tier 1 (CET1) capital ratio Seed gap	Not recorded — seed gap	SEED GAP — not measurable until the baseline for “Commo
Return on equity (ROE) Wired	11.8 percent (EBITDA margin proxy)	Measurable now from the tenant baseline (Revenue & cost
Financial-forecast accuracy Wired	78 percent (forecast vs actual)	Measurable now from the tenant baseline (FP&A reconcilia
Planning and close cycle time Wired	8.5 business days to close	Measurable now from the tenant baseline (Month-end close bas

The assembled case is auditable end to end — baseline coverage is 33%, with 4 metrics recorded and 8 declared seed gaps. None is invented.

- Baseline coverage is 33% — 4 metrics are recorded by the Move, 8 are declared seed gaps inherited from the Function Pack. The assembled case is auditable end to end; none of these numbers is invented.
- The left column is sourced fact; the right column is declared seed gaps — stated, owned and named with their source, not hidden.

Metric	Value	Source	As of	Confidence
Cost of funds	4.6 percent (blended)	Debt & FX exposure (treasury_kyriba)	2026-03-31	medium
Return on equity (ROE)	11.8 percent (EBITDA margin proxy)	Revenue & cost baseline (finance_performance)	2026-03-31	medium

This dossier is the assembled book — and 7 other kernel-derived board-grade decks are its chapters, each linked below for THIS Move.

- This dossier is the assembled book — and 7 other kernel-derived board-grade decks are its chapters. Every one is linked below with a working View link that carries this Move's id, so it renders this Move's kernel-derived chapter — never the Apex reference.
- Each card links straight to that chapter's deck for this Move.

KILL — the Move does not pay back on current evidence.

- Base-case net return is not positive — the Move does not pay back on current assumptions.
- Close the seed-gapped operating metrics and supply the tenant's own spend base so the value forecast can be stated in hard dollars.
- Clear the critic blocker: Value cannot be monetised to a hard dollar figure — the gross value range rests on a seed-gap proxy. The CFO will not approve a fabricated return; the case must close the baseline gap first.
- Clear the critic blocker: 8 baseline metric(s) are seed gaps (coverage 33%): Net interest margin (NIM), Liquidity coverage ratio (LCR), Net stable funding ratio (NSFR), Economic-value-of-equity rate sensitivity, Net-interest-income rate sensitivity, Loan-to-deposit ratio, Deposit beta, Common equity tier 1 (CET1) capital ratio. The case is grounded only on what is recorded.
- Capture "Net interest margin (NIM)" from its named data source before the funding gate.
- Capture "Liquidity coverage ratio (LCR)" from its named data source before the funding gate.
- Capture "Net stable funding ratio (NSFR)" from its named data source before the funding gate.

- Net return is negative in the conservative case (-8561340.29). Kill or re-shape if the downside cannot be lifted above zero.
- The baseline seed gap that blocks monetisation is not closed before the gate — without it the return is unverifiable.
- Baseline coverage stays below acceptable level — 8 seed gap(s) remain unresolved at the gate.
