

Charter business-case skeleton

Contact Center AI Routing

Tenant: Apex Retail

Tenant key: apex-retail

Move ref: apex:move:contact-center-ai-routing

Generated: 2026-05-20

The quantified value hypothesis, the CFO-readable business-case skeleton and the stop/kill criteria.

Every figure in this document is produced by the Moves Expert Kernel from the tenant's audited substrate. Absent data is declared a seed gap, never invented. Effort rests on a researched planning rate card — a market range, not a quote. Generated by AbarVa · Moves.

Charter — value hypothesis & business-case skeleton

Contact Center AI Routing · apex-retail

Verdict: SHAPE — do not fund as-is

The critic raised 1 blocker(s) — fund only after they are resolved (see critic findings). Re-shape the Move to close them, do not fund as-is.

Economics

Investment (effort)	\$1,873,179 – \$3,085,236 (base \$2,203,740)
Net value (post-haircut)	\$8,282,820 – \$14,335,650 (base \$11,309,235)
Net return	\$5,197,584 – \$12,462,471 (base \$9,105,495)
Payback	Not monetisable — the value rests on a baseline seed gap, so the kernel returns no payback rather than a fabricated one.
Monetisable	No

Sensitivity

Base net return	\$9,105,495
Conservative net return	\$5,197,584
Upside net return	\$12,462,471

The case breaks if the baseline seed gap is not closed — without the missing unit economics the value range is a proxy, not a forecast.

Named assumptions

- `annual_contact_volume` — Annual agent-handled contact volume is ~9.0M (benchmark for an \$80B retailer) — used only to express value in operational hours. (owner Priya Iyer (Program Lead); confidence low)
- `cost_per_contact` — Fully-loaded cost per contact is ~\$6.50 (benchmark proxy) until the tenant baseline due 2026-05-15 lands. (owner Brendan Fox (CS Ops); confidence low)
- `containment_uplift` — AI routing lifts containment ~12 points (28% ' 40% target) — the KPI dictionary states this uplift target explicitly. (owner Priya Iyer (Program Lead); confidence medium)
- `adoption_ramp` — Customer Care agents reach 70% steady-state adoption by year 2; the WFM lead is on record preferring agent-assist over IVR replacement. (owner Mariana Rojas (WFM Lead); confidence medium)
- `privacy_gate_clears` — The transcript-use privacy review (2026-05-17 milestone) clears without scope cuts that remove agent-assist features. (owner Elena Fischer (AI Governance); confidence medium)
- `rate_card` — Blended delivery rate card reflects market rates for AI build and integration roles. (owner David Okafor (Program Lead); confidence medium)

Stop / kill criteria

- `kill_downside_negative`: Net return is negative in the conservative case (5197584). Kill or re-shape if the downside cannot be lifted above zero.
- `kill_monetisation_unresolved`: The baseline seed gap that blocks monetisation is not closed before the gate — without it the return is unverifiable.
- `kill_baseline_unclosed`: Baseline coverage stays below acceptable level — 4 seed gap(s) remain unresolved at the gate.
- `kill_privacy_gate_blocks`: The 2026-05-17 transcript-use privacy review fails and removes agent-assist features — the value case loses its core mechanism.

Critic findings — surfaced, not hidden

- [blocker/cfo] `cfo_monetisation_blocked`: Value cannot be monetised to a hard dollar figure — the gross value range rests on a seed-gap proxy. The CFO will not approve a fabricated return; the case must close the baseline gap first.
- [concern/data] `data_baseline_seed_gaps`: 4 baseline metric(s) are seed gaps (coverage 60%): Cost per contact (labour), Annual contact volume, Channel mix (voice/chat/IVR split), QA error rate. The case is grounded only on what is recorded.
- [concern/data] `data_top_mover_is_proxy`: 2 of the top-3 case-moving assumptions stand in for absent tenant data (`annual_contact_volume`, `cost_per_contact`). Validating these is the highest-leverage next step.
