

Mobilize & go-decision packet

Contact Center AI Routing

Tenant: Apex Retail

Tenant key: apex-retail

Move ref: apex:move:contact-center-ai-routing

Generated: 2026-05-20

The mobilization plan, adoption & change approach, the value-measurement model handed to Tower and the go-decision pack.

Every figure in this document is produced by the Moves Expert Kernel from the tenant's audited substrate. Absent data is declared a seed gap, never invented. Effort rests on a researched planning rate card — a market range, not a quote. Generated by AbarVa · Moves.

Mobilize & Handoff — adoption, measurement, go-decision

Contact Center AI Routing · apex-retail

Go-decision: NO GO

No-go: 2 Mobilize kill trigger(s) fired (measurement_unwired, business_case_blocker_open). The Move is not ready to leave Moves. See the fix-conditions for what must change before it is reconsidered.

Mobilize readiness

Owned	Yes
Adoptable	Yes
Measurable	NO
Operating-model owner	Mariana Rojas (WFM Lead, Customer Care Operations)
Overall change load	high

Fired kill triggers

- measurement_unwired: 1 committed value metric(s) cannot be wired to a recorded baseline: Cost per contact (labour). — fix: Revisit when every committed metric is wired to a Discover baseline value or an owned, dated plan to capture one.
- business_case_blocker_open: The business-case critic has 1 open blocker(s): cfo_monetisation_blocked. — fix: Revisit when the business-case critic reports no open blocker.

Conditions to clear

- measurement_unwired: Revisit when every committed metric is wired to a Discover baseline value or an owned, dated plan to capture one.
- business_case_blocker_open: Revisit when the business-case critic reports no open blocker.

Adoption & change approach — seven dimensions

Dimension	Magnitude	Recommendation
impacted_roles	high	Three roles change; the agent role changes most. Stage the rollout by team rather than flipping the floor at once.
process_variance	high	Routing logic varies handling materially; recommend a process re-design workstream lands before the change rollout (it is budgeted in the Design & Plan estimate).
training_load	moderate	Role-based training: a heavier curriculum for agents (assist tooling), a lighter one for managers and WFM analysts.
incentive_change	moderate	Re-point agent performance incentives away from raw handle time toward resolution quality, so the new routing is not fought by the old scorecard.
manager_adoption	high	Manager reinforcement is the highest-risk layer. Recommend a dedicated manager-enablement track and explicit reinforcement in the hypercare window.
communications	moderate	Address the agent narrative directly — AI routing augments agents, it does not replace them; the WFM lead is on record preferring agent-assist over IVR replacement.
hypercare	moderate	A 6-week hypercare window with elevated floor support and a daily routing-quality review; exit when adoption and CSAT hold for two consecutive weeks.

Impacted roles

Role	Headcount	What changes
Customer Care agent	Not recorded — seed gap	Agents move from manual call handling to AI-routed, assist-augmented handling; harder calls now reach them.
Customer Care team manager	Not recorded — seed gap	Managers coach to new routing/assist metrics and reinforce the changed handling pattern daily.
Workforce-management analyst	Not recorded — seed gap	Capacity planning re-baselined around the new containment and AHT mix.

Value-measurement model — handed to Tower

Metric	Baseline	Target	Owner
Contact Center Containment	28	40	WFM Lead

Average Handle Time	7.2	6.5	WFM Lead
CSAT (post-interaction)	4.1	4.4	Customer Care Operations
Cost per contact (labour)	Not recorded — seed gap	Not recorded — seed gap	CS Ops
