

Charter business-case skeleton

Fraud Detection Enhancement

Tenant: First Capital Financial

Tenant key: first-capital

Move ref: first-capital:move:FC-FRAUD-2026

Generated: 2026-05-20

The quantified value hypothesis, the CFO-readable business-case skeleton and the stop/kill criteria.

Every figure in this document is produced by the Moves Expert Kernel from the tenant's audited substrate. Absent data is declared a seed gap, never invented. Effort rests on a researched planning rate card — a market range, not a quote. Generated by AbarVa · Moves.

Charter — value hypothesis & business-case skeleton

Fraud Detection Enhancement · first-capital

Verdict: SHAPE — do not fund as-is

The critic raised 1 blocker(s) — fund only after they are resolved (see critic findings). Re-shape the Move to close them, do not fund as-is.

Economics

Investment (effort)	\$1,587,595 – \$2,614,863 (base \$1,867,759)
Net value (post-haircut)	\$1,302,840 – \$4,921,840 (base \$3,112,340)
Net return	-\$1,312,023 – \$3,334,245 (base \$1,244,581)
Payback	Not monetisable — the value rests on a baseline seed gap, so the kernel returns no payback rather than a fabricated one.
Monetisable	No

Sensitivity

Base net return	\$1,244,581
Conservative net return	-\$1,312,023
Upside net return	\$3,334,245

The case breaks if the baseline seed gap is not closed — without the missing unit economics the value range is a proxy, not a forecast.

Named assumptions

- `alert_volume` — Annual fraud alert volume is a modeled proxy (~120k alerts/yr for a bank of First Capital's scale) — used only to express review load. (owner David Chen (Risk Technology); confidence low)
- `false_positive_cost` — Each false-positive investigation costs a modeled ~\$18 of analyst time — no per-alert handling cost is seeded. (owner James Park (CRO); confidence low)
- `fraud_analyst_fte_cost` — Fully-loaded fraud-analyst FTE cost is a modeled proxy (~\$135k/yr) until First Capital Finance attests a figure. (owner Michael Torres (CFO); confidence low)
- `fraud_loss_takeout` — The detection-model enhancement closes card fraud losses from \$2.1M toward the \$1.2M peer median — a \$0.9M/yr loss-avoidance ceiling. (owner James Park (CRO); confidence medium)
- `realtime_payment_expansion` — Expanding fraud detection from card to real-time payment fraud after FedNow go-live roughly doubles the addressable fraud-loss surface. (owner Patricia Huang (CIO); confidence medium)
- `rate_card` — Blended delivery rate card reflects market rates for the ML and risk-technology roles in the estimate. (owner Patricia Huang (CIO); confidence medium)

Stop / kill criteria

- `kill_downside_negative`: Net return is negative in the conservative case (-1312023.13). Kill or re-shape if the downside cannot be lifted above zero.
- `kill_monetisation_unresolved`: The baseline seed gap that blocks monetisation is not closed before the gate — without it the return is unverifiable.
- `kill_baseline_unclosed`: Baseline coverage stays below acceptable level — 3 seed gap(s) remain unresolved at the gate.
- `kill_fraud_loss_floor`: Card fraud losses stall above the \$1.8M Q1 run-rate — the detection model has stopped converging on the \$1.2M peer-median target.
- `kill_realtime_expansion_blocked`: FedNow go-live slips far enough that the real-time payment fraud expansion — the larger value pool — cannot be reached in horizon.

Critic findings — surfaced, not hidden

- [blocker/cfo] `cfo_monetisation_blocked`: Value cannot be monetised to a hard dollar figure — the gross value range rests on a seed-gap proxy. The CFO will not approve a fabricated return; the case must close the baseline gap first.
- [concern/cfo] `cfo_downside_underwater`: Downside net value (1302840) is below conservative effort (2614863.13) — in the pessimistic case the Move does not pay back. The CFO will ask what protects the floor.
- [concern/data] `data_baseline_seed_gaps`: 3 baseline metric(s) are seed gaps (coverage 73%): Fraud-analyst FTE cost basis, Fraud alert volume / cost-per-alert, False-positive operational cost. The case is grounded only on what is recorded.
- [concern/data] `data_top_mover_is_proxy`: 3 of the top-3 case-moving assumptions stand in for absent tenant data (`alert_volume`, `false_positive_cost`, `fraud_analyst_fte_cost`). Validating these is the highest-leverage next step.
